

Copy of letter no.IPI-1662-75 dated .30.5.1975 from the Conservator of Forests, Industrial Plantation Circle, Perumbavoor to the Chief Conservator of Forests, Trivandrum.

Sub:- Schedule of rates for filling polythene bags of High Density – data regarding

Ref :- CCF's P1-45812/74

The standard time and daily out put for the following work is given below. This may be approved and communicated. In the meanwhile it is reported that the performance of the High density bags are quite satisfactory for transplanting Eucalyptus plants and raising it for a few months therein. Since the cost of these bags are considerably less than the commonly used low Density bags and the out turn in the work of filling bags with soil is more with High Density than with low density, the High Density bags may be suggested for general use.

Job	standard Time mins	unit	output per day perworker
filling Mannually High Density polythene bags 18 x 12 cms. (lay flat) 100 gauge with sieved dry or moist soil, watering once, refilling and topping the bags & arranging in a level surface	114	100bags	368bags

yours faithfully,  
Sd/-
