Office of the Chief Conservator
of Forests, Trivandrum Dated
19.7.1971.

Circular No.11/71.

Sub: Use of Polythene sheeting for making bags for
raising seedlings.

Ref: -----

It is observed that generally transparent polythene sheeting is made use for making bags for raising seedlings. If instead of transparent material, slightly opaque material known as "High density polythene sheet" is utilised for the above purpose, the expenditure can be reduced to nearly 50% as an economical measure. This material is at present used extensively in the plantation corporation and is found to be satisfactory. Hence, it is suggested that all future requirements for polythene bags may be specified as "High Density polythene sheets". This does not indicate the thickness of the sheets which is expressed as 100,150 gauge etc.

The Conservator of Forests and Divisional Forest Offices are requested to make use of the above material in future.
